

# Our affordable MAG II™ Currency Counter eliminates all excuses.

**MAG II**  
20

## What's your excuse?

**Buying used?** Paying between \$500 to \$600? Then you're paying too much for a currency counter that uses older technology and has seen its better days. No matter how you approach it... used is used!

**Renting?** Compare cost, you'll see that renting is cost prohibitive compared to buying a new Mag II™ Model 20...and you own it!

**Repairing or Rebuilding?** Most likely, the quote you'll receive for either of these services will be higher than the price of a new Mag II Model 20. No repair will ever make an old machine new again!

**Hand Counting?** If you are paying an employee to count cash, put a pencil to the cost. If you're counting it personally, what's your time worth? The Model 20 is at least 10 times faster and more accurate than hand counting...time is money!

# MAG II™
